## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of the species of Figure 4 in the reply filed on October 13, 2004 is acknowledged. The traversal is on the ground(s) that examination of additional species would not be a burden to the examiner. This is not found persuasive because determination of the patentability of additional species does present a burden since several inventions must be considered.

The requirement is still deemed proper and is therefore made FINAL.

### ***Drawings***

The drawings are objected to because the spacing between the lines is too close and it is unclear what the numerous lines that are unlabeled represent. Clearer drawings must be submitted. It is suggested that applicant refer to the prior art for examples of what should be submitted. For example, the primary reference used in the rejection below, U.S. Patent 1,689,161 clearly shows detail of the intersection. Similarly, U.S. Patents 2,949,067; 2,946,267; and 2,941,454 each show clearly configured intersections. These are representative of the types of drawings required. It may be necessary to provide additional drawings to show specific details. Also, note the draftsman's comments on the attached PTO-948. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being

Art Unit: 3671

amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 9-11, 17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Skultin (U.S. Patent 1,689,161).

Skultin discloses an interchange having curved portions for each traffic lane in four directions (Figure 2, for example), with first and second exits and a merging area for each direction (Figure 1, for example).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6-8 and 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Skultin, as applied above.

Skultin does not teach the service area surrounded by traffic lanes; however, it is very well known to use service areas surrounded by traffic lanes (as done on turnpikes, for example). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used an empty space surrounded by traffic lanes in Skultin in order to provide service for vehicles and drivers, as is well known.
